# Install new devices to your Vivado Installation

The design involved in this lab requires more resources than any Zynq-7000 device supported by WebPACK licence provides. Instead, we will target Ultrascale+ ZU7EV device in this lab. We need to install device support for newer Zynq Ultrascale+ family for extra resources.

Step 1: Open "Add design tools and Devices 2020.1"

Find the program in Start:

Step 2: Login your Xilinx account

Step 3: select Zynq Ultrascale+ MPSoC family to install

Please note in my computer this device is already installed, so it is greyed out.

Step 4: Install

Step 5: Restart all Xilinx software to use new devices
